

LESSON PLAN

# of students	30	Subject	Physical Education	Grade Level	5
Length of Class Period	40 minutes	Unit of Study	Basketball	Lesson #	1 of 3
Your Name	Emma Ly				

IDENTIFY DESIRED RESULTS

Learner Outcomes from the Program of Studies

What are the SPECIFIC outcomes to be addressed in this series of lessons?

Subject Area: Grade 5 Physical Education

Motor Skill Development: Developing physical literacy through movement and active living supports well-being across a lifespan.

How might tactics support decision making in physical activity contexts?

- **Knowledge:** Strategies and tactics include reducing open spaces by working with others, creating space for teammates, and varying rhythm and intensity of movement.
- **Understanding:** Creative thinking is required to generate strategies and tactics
- **Skills & Procedures:** Choreograph creative strategies and tactics
- **Knowledge:** Strategies and tactics include skill execution and anticipation.
- **Understanding:** Strategies and tactics involve making decisions with limited time and space.
- **Skills & Procedures:** Demonstrate decision making through the application of strategies and tactics.

What is the relationship between collaboration and physical activity?

- **Knowledge:** Collaboration is working with others to achieve a common goal, including exchanging ideas and sharing responsibilities.
- **Understanding:** Teamwork requires collaboration to create and enhance strategies.
- **Skills & Procedures:** Practise collaboration during physical activity.

Health and Well-being Considerations

Throughout the lesson, students will have opportunities to play with their peers and friends. This will help reduce stress and allow students who need extra support to receive it from their peers. Additionally, if at any point a student is feeling unwell or needs a break, they may sit down.

Objective in student-friendly language What will students understand/experience/appreciate as a result of this lesson?	Assessment Strategies What will I accept as evidence of learning/development? Have I employed formative assessment? Do I make use of prior assessments in this lesson?
By the end of this lesson, students will be able to: • Demonstrate effective basketball shooting technique • Cooperate and communicate effectively in small-group activities. • Apply learned skills in a modified basketball game.	As the first lesson in a basketball series, this lesson will primarily focus on formative assessment. Formative: • Teacher observation during bump and modified basketball games • Verbal feedback and questioning • Peer communication and teamwork check-ins
Resources (Everyone) What materials/resources/technology will be required?	Personalization/Differentiation How will you attend to the needs of ALL learners in this lesson?
Equipment: • Basketballs (15) • Basketball nets (6) • Whistle Technology: • No technology is required for this lesson; all activities are equipment-based and hands-on. Additional Notes: • All equipment is selected to ensure safety, accessibility, and inclusivity.	Universal Interventions (all students): • Provide clear demonstrations and verbal cues for each skill and drill. • Encourage peer support in paired and small-group activities, fostering social learning and inclusivity. Targeted Interventions (small groups of students): • Reduce shooting distance for students who may still be developing their shooting skills. Individual Interventions (specific students): • Offer extra practice and teacher support for shooting as needed.

● Foam balls of different sizes allow students to choose one that is comfortable and manageable. ● Cones and floor markers help students with spatial awareness and positioning, especially for those needing extra support	● Provide one-on-one coaching or check-ins for students with ADHD, emotional/behavioral challenges, or those requiring additional focus.
Differentiation	
This lesson is designed to meet the needs and interests of all students by incorporating flexible activities and supportive group structures. Pairing and grouping students ensures that learners have peer support and can model or scaffold skills for one another, which is especially helpful for English language learners, students with ADHD, or those on the autism spectrum (Chu, 2021). Specific adaptations include allowing reduced shooting distances or slower-paced gameplay for students who need extra practice (Kilborn, 2021). Additionally, providing clear expectations and flexible activity choices (e.g., bump or modified basketball) supports students with social or behavioral challenges in participating comfortably and successfully. Overall, this lesson incorporates universal, targeted, and individual interventions to support diverse learners and create an inclusive environment that promotes skill development, confidence, and meaningful participation for all students.	
Safety Considerations How will you ensure that students are safe at all times?	
Safety considerations include clearly marked boundaries using cones, and adequate spacing between groups ("Safety in PE Class," 2026). No-contact rules are reinforced throughout the lesson to minimize the risk of collisions during play (Alberta Centre for Injury Control & Research & Alberta Education, 2013). For modified basketball specifically, students are reminded to maintain awareness of other players, avoid running into opponents, and use controlled passing techniques to reduce the likelihood of injury (Alberta Centre for Injury Control & Research & Alberta Education, 2013). Students are also instructed to keep their eyes up while moving, communicate verbally with teammates, and remain spatially aware during all games and activities. Prior to the start of the lesson, the teacher will perform a safety check of the gymnasium to ensure that there are no hazards or potentially dangerous situations (Alberta Centre for Injury Control & Research & Alberta Education, 2013).	

Introduction and Hook

How will you **ACTIVATE** prior knowledge, **ENGAGE** them in the lesson, and how does this lesson connect to prior lessons?

The lesson begins with a brief overview of the activities in the class. Students will be reminded of safety cues and the importance of controlled shooting and passing, spatial awareness, and general safety.

Learning/Activity Sequence

How will students **EXPLORE**, **EXPLAIN**, **ELABORATE**, and/or **EVALUATE** their understanding of the outcomes? How will you scaffold the learning activities to ensure students are remembering, understanding, applying, analyzing, evaluating, cooperating, and/or creating?

Teacher activities and instructional strategies to meet the objectives and student learning needs	Learning activities and student engagement strategies that explore and demonstrate understanding of the objectives	Teaching Cues	Approx. time
The teacher welcomes students and provides a brief overview of the day's activities. The structure of the lesson will be a partner warmup, basketball game ("bump"), and modified games of basketball.	Students listen and prepare for the lesson.		1 minute
The teacher will explain the warmup. Working in pairs, students will use one hand each to hold a basketball between them. They will move within their side of the gym and attempt to knock other teams' basketball out of their hands. For the first half of the warmup, teams will be allowed to re-enter the game if their ball is knocked. In the second half, they will be eliminated until one team is left.	In pairs, students will grab a basketball and find an area in their designated side of the gym. Girls will go on the left side of the gym, and boys will go on the right side. They will play until the time runs out or they are eliminated.	"When I say go" and "go" as cues for students to know when to grab a ball and find a space in the gym.	10 minutes

The teacher will call students to sit in the center of the gym and explain the next activity. In this activity, students will get into 6 groups, one group at each basketball net in the gym. They will line up single file, with the first two people in line holding a ball. The first person will shoot. If they get it in, then they will pass the ball to the next person in line and run to the back of the line. If they miss, the second person can start shooting. If the second person gets it in before the person in front of them, then the front person is eliminated. If the front person gets it first, then the second person is now considered the front person and the game continues.	Students will stand in a single file line by a basketball net in the gym. Group size does not matter, and students have the option of playing bump with other students of their choice by going to the same net.	“Make sure you aren’t throwing the ball as hard as you can or randomly” “Thank you _____ for passing the ball nicely to the next person in line” as positive enforcement for behaviours	20 minutes
For the last 5 minutes of class, the teacher will go to each group and give them the option of continuing to play bump or to play a modified game of basketball with the people at their net.	Students can choose to continue playing bump, or they can transition into a modified game of basketball.	“Be aware of your surroundings and don’t crash into other players” “Make sure you aren’t going so far away from your net that you’re in space of other players at different nets”	5 minutes
The teacher will call students to return the balls and line up at the door.	Students will return their basketballs and line up silently by the door with their class.		5 minutes

Conclusion

How will you ensure students walk away with a sense of understanding the PURPOSE of the lesson and its IMPORTANCE to their learning? What should the next lesson cover or review based on this lesson?

To ensure students understand the purpose and value of today's lesson, the class will conclude with a brief group reflection during lining up. The teacher will review the key skills practiced—shooting technique, controlled passing, spatial awareness, and communication—and highlight how these skills contribute to successful basketball gameplay.

Students will be asked to think about their performance and share (either verbally or with a quick show of hands) one skill they improved on and one skill they would like to continue developing. This encourages self-reflection and provides the teacher with immediate formative feedback to guide future lessons.

The teacher will also reinforce positive behaviors observed during the lesson, such as teamwork, effort, and safe participation, emphasizing the importance of cooperation and awareness during both drills and gameplay. By connecting activities like bump and modified basketball to real game situations, students will develop a clearer understanding of how individual skills transfer into gameplay.

Next Lesson Focus:

The next lesson will build on today's skills by further developing shooting technique (e.g., layups or set shots), introducing basic offensive and defensive positioning, and incorporating more structured basketball gameplay. Students will continue to apply teamwork, communication, and decision-making in game-like scenarios.
