

LESSON PLAN - Scooter Series!

Subject/Grade: 1	Unit: Scooters!	Date: March 23, 2026	Teacher: Ms. Ly
# of Students: 25-30	Class Length: 45 minutes	Lesson: #1	Location: Small Gym
Equipment: - Class set of scooters - 10-20 pylons - 5 bean bags			
Outcomes: <u>Movement Skill Development:</u> Students exhibit spatial awareness during a variety of physical activities - Demonstrate various ways of moving safely through space during physical activity - Demonstrate appropriate responses to environmental cues <u>Active Living:</u> Students investigate the benefits of physical activity - Participate in a physical activity in a variety of contexts to improve well being - Experience changes in the body as a result of participating in physical activity			
Lesson Focus: Establish safe scooting practices. Teaching students about spatial awareness and how they can safely move through space.			
Lesson Objectives (SWBAT): Students will be able to safely move through space in the context of a scooter. Students will be able to describe the physical changes in their body (ex. Increased heart rate, sweating) Students will be able to demonstrate appropriate responses to environmental cues (ex. Pylons in the environment)			

Plan for Differentiation:

- Students have the choice to go at the pace that is most appropriate for them.

Time	Teaching Activities – Movement Tasks	Organization/ Student Activity	Teaching Cues/ Assessment for Learning
INTRODUCTION			
5-10 minutes (up to 10 minutes, depending on how much fun students have)	Red Light Green Light! - Red light green light with different locomotor skills (ex. Hopping, galloping, etc) - Asking students what other movements we should do after I choose the first few	Remind students to be an arms width away from other students	Show an example of the different locomotor skills
BODY			
5 minutes	Scooter Exploration - Give students a chance to just explore the scooters and do what they want to do - Free time for students!	Tell students to first get a scooter and sit with their scooter upside down	Remember safety cues for students: - Keep clothing, hands, feet away from the wheels - Never stand on the scooter - Always keep the scooters in control (don't crash into others)
15 minutes	Red Light Green Light - Scooter Challenges! - Challenge students to do specific moves (ex. Zigzag, move between the pylons)) Set up pylons and make a mini obstacle course for students to move through		Remind students that their goal is to go around pylons, not hit them
CONCLUSION			

10	Scooter Tag - 5 students will be given bean bags - Students will play tag on their scooters, using the beanbag to show who is “it”	Students with beanbags are “it” If they tag another student, then they pass the beanbag to them, to show that they are it	Remember to debrief safety cues again Also mention that beanbags are NOT for throwing and should be held Students must show their beanbag
Extra Time	If time allows: Discussion! - Open discussion on how you can use scooters to be active		
SAFETY CONSIDERATIONS			
Students should be reminded of scooter safety at all times and should remain a safe distance away from other students. The teacher will be constantly monitoring students to ensure that they are being safe.			
ASSESSMENT STRATEGY			
Observation: Observing student effort, proficiency with moving with the scooter, safety
